Program Title:
Safety, Design and Construction of Preassembled Stairs

Program # PAS511 / 2011 (North Atlantic Corp.)

Description:
This course explores the history of staircases from the earliest designs to the designs of today that meet strict code compliance. The anatomy of the stair is explored along with the construction techniques of preassembled stairs versus site built stairs.

Learning Units: 1.5
Credit Designations: LU|HSW
Course Format: Instructor-led face-to-face

Learning Objectives:

Upon completion of this course one should be able to...

1. determine the anatomy of the staircase and understand the construction of a staircase.
2. understand the designs of staircases.
3. determine if a stair is safe and meets code compliance
4. understand the difference between preassembled stairs and site built stairs
